

RIDING YOUR EBC BIKE/OPERATING PROCEDURES:

1. Charging Your Battery

Your bike comes with an On Board Charging System accessed by the pull out ZIP CORD on the left side of the battery pack.

This can be plugged into any 110 volt outlet from your home or when you're out and about.

When the battery is charging you will hear the fan come on and the RED charging light will be on. The light is located where the Zip Cord comes out of the battery pack. When the battery is done charging the fan will turn off and the light will turn GREEN.

After charging is complete, unplug the cord from the wall and give the cord a quick tug pulling straight out from the battery pack a couple of inches and then release tension allowing the cord to retract into the battery pack.

Note: It is best to keep hanging on to the cord as it goes back into the battery pack top ensure it recoils smoothly and properly.
